

# QuickConnect

QuickConnect is the fastest and most efficient way to share or receive contact information, with the use of personalized QR Codes.

QuickConnect is a mobile based application, designed for on-the-go use. When a user creates an account they are given a personalized QR Code. The user will also create a personal 'contact card' where they can input their contact information, such as: phone, email, or social media accounts. The user will be able to cater to their own needs; they can create their card with a business or social approach. When this user's QR Code is scanned, all of their information on their 'contact card' will be shared to the scanner and automatically creates a contact for them. With integration to the phones native contact application, this is a seamless way to share contact information without having to physically input said information.
